

Chewgels™

Innovation in **OTC**
for better **consumer**
acceptance

An explosive experience with our innovative technology

As patients and consumers continue to seek novel formats that deliver a completely new experience, **CDMOs** need to understand what consumers prefer in terms of oral dosage forms and try to satisfy those needs through innovative options. **OTC** and **Specialized Nutritional Products** are purchased by consumers based on their perceived value in addressing **their health conditions or maintaining good health.**

At **Sofgen CDMO®** we take those needs into consideration and transform them into ideal technologies and **Chewgels™** is a clear example of that.

Our **Chewgels™** technology consists of a **chewable capsule** that delivers an active ingredient without the need for water and with a delicious flavor making it a **convenient, portable, on-the-go solution.**

With Chewgels™ we are leveraging techniques widely proven in the food industry and adapting them to our pharmaceutical standards, achieving the desired chewability, texture and flavor experience.

Some of the benefits of **Chewgels™** include:

Shell **Solubility and Stability** assurance.

With our **Chewgels™**, the fill content may contain **solutions, suspensions, pastes and emulsions.**

We have the ability to select the right **gelatin and appropriate excipients** to hold the **ingredients and the flavoring.**

Lipid coating of the API for special taste-masking applications
